Color Mode
Choose CMYK from the pop-up menu.

Inks
Black should be 100%.
Cyan, Magenta and Yellow should be at 0%.

A Adobe Illustrator
You can create a spot varnish swatch in Adobe Illustrator and apply it to your artwork.

A

After you have created a new swatch, apply it to the elements you want to have a Spot Varnish or Spot UV Coating.
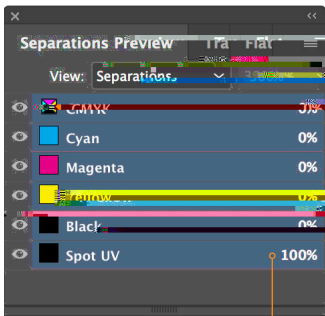

▶ It's very important that all the elements you want to apply a Spot Varnish or Spot UV Coating to are identical in all aspects including size, orientation and position to your original artwork.

✓ Only use vector art (typically created in Adobe Illustrator or InDesign)

● Avoid thin lines, fine artwork and small type.

Walsworth

D

Use the Separations Preview panel in InDesign to verify the Spot Varnish or Spot UV Swatch has been applied correctly.

1. (> >),

2. C , ,

Separations Preview		
View: Separations		
👁 CMYK		
👁 Cyan	0%	
👁 Magenta	0%	
👁 Yellow	0%	
👁 Black	0%	
👁 Spot UV	100%	

You can also verify it was applied correctly by hovering over the type or artwork that you applied the Spot UV Swatch. You should see 100% next to the Spot UV plate.
